EDUCATION

Tecnológico de Monterrey Campus Estado de México

August 2024 - Present

B.S. in Computer Science and Technology | GPA: 3.3

TECHNICAL SKILLS

Programming Languages: C++, Clojure, JavaScript, TypeScript, Python, SQL

Web Development: HTML5, CSS3, Sass/SCSS, React, Angular, Node.js

Cloud & Databases: Firebase, MySQL, Google Cloud, AWS

Tools & Platforms: Git, GitHub, Postman, Jira, CISCO Packet Tracer

Development Environments: VS Code, IntelliJ IDEA, WebStorm, PyCharm, Android Studio

AI & Data : Machine Learning, AI-assisted development, Pandas, Polars

EXPERIENCE

DiDi | Dark Kitchen Operations Intern

September 2026 - Actual

- Coordinated daily order fulfillment to ensure accurate and timely deliveries.
- Monitored inventory levels and supported stock replenishment.
- Analyzed operational performance to identify process improvements.

KidTales | Full-Stack Developer

June 2025 - August 2026

- Developed and maintained a responsive web application using HTML, CSS, JavaScript, Angular, and Firebase.
- Managed application data, content records, and database updates through Firebase.
- Supported the redevelopment of AI-powered features for personalized storytelling and educational content.

MCM Telecom | Summer Camp Intern

May 2023 - July 2023

- Prepared and reviewed purchase orders, verifying supplier details, quantities, prices, and documentation.
- Organized invoices, receipts, and purchase orders to support accurate and timely supplier payments.

AWARDS & COMPETITIONS

Xignux Challenge | Second Place Winner

June 2026

- Participated in the Xignux Challenge with KidTales.

Hackathons

June 2025 - Present

- Participated in four hackathons, gaining hands-on experience in rapid prototyping, teamwork, problem-solving, and software development under time constraints. Winner of one hackathon.

Certifications & Badges

- Scrum Master Certification; Google Cloud Skills Badges in cloud computing, infrastructure, data, and application development.

ICPC - Regional contest

2025 - 2026

- Participated in regional competitive programming contests, solving algorithmic problems under time constraints.

PROJECTS

Predictive Advertising Model for Banking Clients

May 2026

- Developed a machine learning model to predict customer behavior for advertising campaigns in a banking use case. Worked with data processing tools such as Polars and participated in the training and evaluation of an AI/ML model to support data-driven decision-making and customer targeting strategies.

Unity Video Game for Partner Organization — Academic Project

February 2026 - April 2026

- Developed a video game in team using C# and Unity for a partner organization, applying software development methodologies throughout the project lifecycle. Contributed to the design and implementation of the database (MySQL), the supporting web platform (React), and project management workflows using Jira. Using AWS services: RDS, EC2, AWS Lambda, Cloud9.

AI and Git Mentor

February 2026 - May 2026

- Led a group of 10 community service students, guiding them through the use of artificial intelligence tools, Git, and collaborative development workflows to help them become familiar with modern tech practices.

Network Design & Implementation — Academic Project

June 2026

- Designed and implemented a segmented network using Cisco Packet Tracer and physical networking equipment. Configured IP addressing, routers, switches, network security, and inter-segment connectivity, validating communication.

LEADERSHIP & ACTIVITIES

Vice President | Computer Science Student Representation Group

June 2026 - Present

- Supported academic representation initiatives, coordinated student activities, and contributed to communication between students and faculty.

President | Flopware - Open Source Student Group

July 2026 - Present

- Lead a student organization focused on promoting open-source culture, collaborative software development, GitHub workflows, and community-based learning.
